Abrasive Technology

# Klingspor presents:

## The new range of retail products

They are finally here: Klingspor's popular and premium abrasives are now available in smaller packaging units! Expand your extensive selection by our high-quality abrasives and tap into new groups of customers.

Comprising nearly 300 products, Klingspor's range of retail products covers both off-hand sanding applications and sanding with handheld machines. We made sure to include the most commonly used machine types, dimensions and hole patterns. Aside from single package units of self-fastening discs, strips, sheets, abrasive sponges and small abrasive mops, the bulk of the new range is made up of sets offering various grit sizes. Better yet, the selection now also includes all standard cutting-off wheels, packaged in a convenient tin with viewing window.

Offer your customers professional abrasives in smaller packaging units, letting them choose exactly the amount they need.

# Sanding in the trade industry

## **Joiners, carpenters and cabinetmakers**

Klingspor's range of retail products includes a large number of products for the woodworking sector. Covering all common machine types from random orbital sanders to orbital sanders and delta sanders, it also offers a multitude of products for off-hand sanding.

## **Drywall installers**

Drywall installers often need to sand joints or transitions between plasterboard panels or ceilings. Klingspor's retail range encompasses products for long neck sanders and provides for efficient sanding in areas that are hard to reach.

## **Painters and varnishers**

The application of any new coat of paint or varnish requires that all remnants of old paint or varnish be removed. For this type of application, Klingspor offers aggressive abrasives that deliver a long service life. Their special coatings allow the abrasives to sand the surfaces for a long time and with great efficiency.

## **Metal workers**

Besides cutting-off wheels in small packaging units, Klingspor's range of retail products also provides file belts in the most customary dimensions. Metal workers can rely on the quality and performance they have come to expect from Klingspor's products.

## **Plumbers**

Common applications in the plumbing trade involve the severing, cutting to size and cleaning of pipes. For these types of applications, Klingspor's range of retail products offers scores of products capable of serving the individual needs of the industry.

Their striking design is a perfect match with other types of Klingspor packaging, e.g. those used for diamond cutting blades and brushes

The sticker with EAN code includes the item number and the country of origin

Clear instructions for use – only the pictograms of the recommended application

Neutral pictogram of the machine – always up to date

Sticker containing all specific information relevant to the product: Dimensions in millimetres and inches, grit size, product type and self-fastening pictogram

Packaging can be opened from either side – the cut-out on the front side reflects the shape of the product on the inside and allows the user to experience the product haptically.

All relevant pictograms on the reverse

# The appealing design will capture attention in any retail store

Our new packaging concept helps the customer find their way around the product range with ease as it ensures that all key information on safety and use is included. The packaging itself offers easy-to-understand pictograms along with a cut-out that lets the customer examine the abrasive. This gives your customers an opportunity to experience the product haptically, which is of pivotal relevance to the purchasing decision.
